

Unified Endpoint Management (UEM)

IBM MaaS360® with Watson®, Mobile Threat Management and TeamViewer

Prevent

Detect

Respond

Manage

Decrease the time and cost of laptop and mobile management

Ensure compliance with GDPR and other regulations

Strengthen mobile security

Consolidate and simplify the management of laptops, mobile devices, wearables and IoT

Separate work from personal data and prevent data leakage

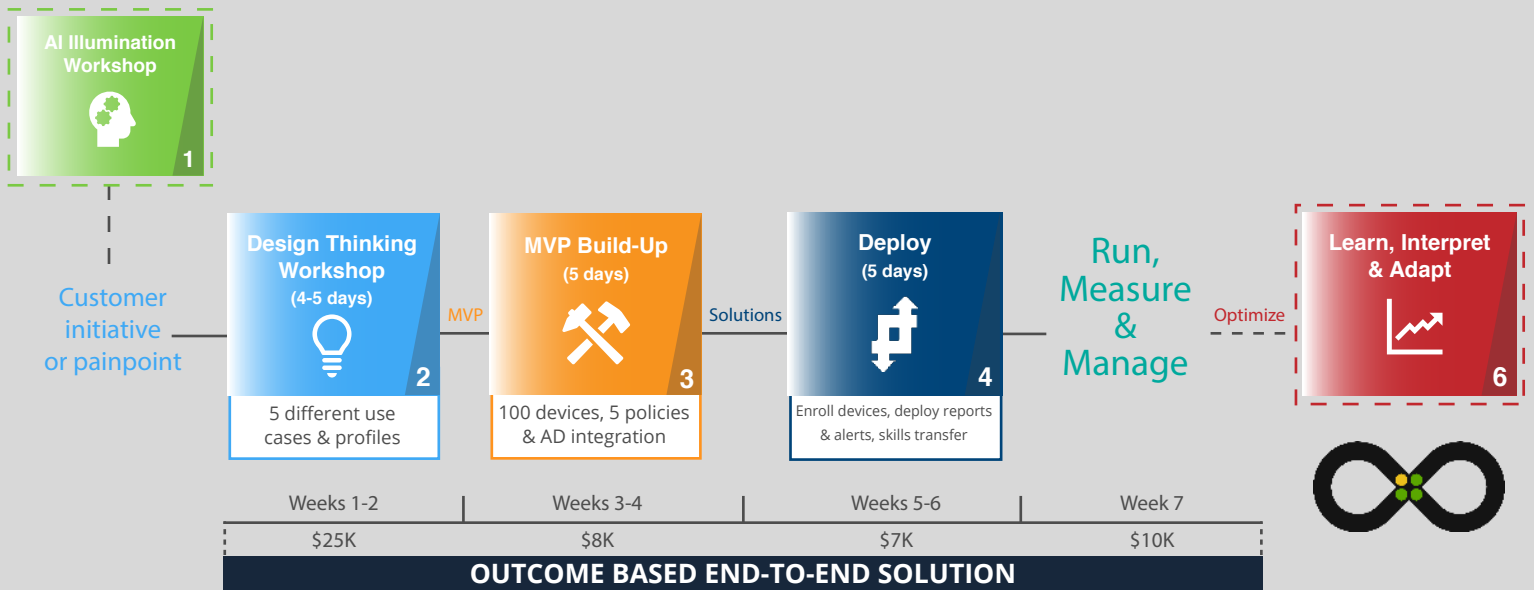

Distribute, manage and protect applications across endpoints

Endpoints continue to advance, employees come and go and the security landscape is in constant flux. IT must rise to the challenge of managing a disparate and growing number of endpoints, operating systems and platforms. The only efficient method of managing and securing all endpoints, their users, apps, content and data is to deploy a unified endpoint management (UEM) solution that changes and adapts with new technology, more skilled users and increasingly sophisticated attacks by hackers.

About Smart Accelerators

Smart Accelerators are fixed-price offerings that deliver Design-driven Agility and Execution based on SIA Next Generation Services. They combine Design Thinking with an MVP (Minimum Viable Product) Build-up & Deployment and Cloud Managed Services to deliver rapid time to value. Deploy a pilot project in 3 months or less and let us manage the cloud-based solution for you!

“Think Big,
Start Small,
Scale Fast!”
